# Simplify Your IT Monitoring.

GroundWork Monitor® is an on-premise monitoring platform for physical, virtual, cloud, and hybrid-cloud infrastructures. We bring everything together into single pane of glass for complete visibility into your entire IT environment.

*Collect metrics from Azure, AWS, VMware, Red Hat, Cloudera, OpenStack and more.*

Unified Monitoring

We bring together performance and availability for your entire application stack and infrastructure. With flexible and customizable workflows, as well as powerful integrations, GroundWork is your central point in monitoring data collection and status alerting.

Automation

Get real-time data gathering with GroundWork agents and API-based monitoring. With automated network discovery and device registration, we make it easy to reduce manual intervention... and focus on what's important to you.

Operations Analysis

Data overload? GroundWork can help. With effective log data management technology, data analysis graphing, and open API's for your data warehousing, we are the monitoring solution for your IT data management suite.

GroundWork Monitor® 7.2.1 at a Glance

Cloud Hub
Continuous configuration and metric collection from virtual and cloud systems.

Identify bottlenecks between system and system managers.

Network Discovery
Identifies security vulnerabilities and controls network configuration.

Enhance network inventory managment. Lower maintenance costs.

SLA Management
Protects customer commitments that IT systems are performing optimally.

Measure IT services against service agreements. Justify IT costs and budgets.

RESTful API
Enables maintenance integrations between management and monitoring.

Reduce IT staff time for system maintenance.

Custom Dashboards
Customized status views for executives, managers, DevOps, and NOC staff.

Manage IT processes, people, and technology with greater efficiency.

Event Console
Accurate and timely data for incidents and problem analysis.

Prevent system outages and service failures.
