

# GroundWork® — Simplify IT Monitoring

GroundWork Monitor® is a powerful software solution that monitors physical, virtual, and cloud-based infrastructures. GroundWork will simplify your IT monitoring by consolidating visibility and transparency into a single pane of glass.

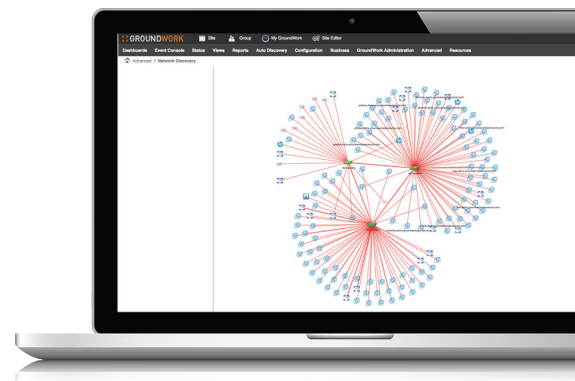

## Unified Monitoring

We bring together performance and availability for your entire application stack and infrastructure. With flexible and customizable workflows, as well as powerful integrations, GroundWork is your central point in monitoring data collection and status alerting.

## Automation

GroundWork agents, along with API-based monitoring, allow real-time data gathering a reality. With automated network discovery and device registration, we make it easy to reduce manual intervention... and focus on what's important to you.

## Operations Analysis

Data overload? GroundWork can help. With effective log data management technology, data analysis graphing, and open API's for your data warehousing, we are the monitoring solution for your IT data management suite.

 GROUNDWORK

# What does GroundWork monitor?

Physical and virtual systems, servers, networks, storage resources, web servers, application servers, cloud systems, containers... and much more.

Contact us at [www.gwos.com](http://www.gwos.com) for a monitoring assessment.

## GroundWork Monitor<sup>®</sup> at a Glance

### Cloud Hub

Continuous configuration and metric collection from virtual and cloud systems.

Identifies bottlenecks between system and system managers.

### Network Discovery

Identifies security vulnerabilities and controls network configuration.

Enhances network inventory management. Lowers maintenance costs.

### Multi-View Status

User interface presents info in multiple simultaneous points of view.

Diagnoses incidents and restores service quickly and accurately.

### RESTful API

Enables maintenance integrations between management and monitoring.

Reduces IT staff time for system maintenance.

### Custom Dashboards

Customized status views for executives, managers, DevOps, and NOC staff.

Manages IT processes, people, and technology with greater efficiency.

### Event Console

Accurate and timely data for incidents and problem analysis.

Prevents system outages and service failures.
